

THE FAIRNESS INDEX

An online tool to examine and explain the nature, causes and consequences of key inequalities in the UK

HOW FAIR IS THE UK?

We all feel strongly about fairness. But people have different views about what fairness means.

We have boiled it down to a set of five principles that we think define a fair society, which we call the *fair necessities*: 

Polling that we carried out in April 2022 shows that the *fair necessities* have strong public support.

Now we are looking at whether each of these five *fair necessities* has been realised in the UK, to help us to answer a simple question: *do we live in a fair society?*

WHAT IS THE FAIRNESS INDEX?

The Fairness Index is a regularly updated online resource that aims to collate and explain the key data about how fair British society is today.

It examines five key gaps in British society, linked to the *fair necessities*: wealth, education, pay, tax, and health. For each of them, it looks at the gaps between rich and poor and between different groups, and the gaps between reality and public perceptions and preferences.

It puts the statistics into context and explains why the gaps are unfair, how they reinforce each other, and what can be done about them.

WHAT DO PEOPLE THINK?

We asked 2,000 adults across Britain whether British society is fair or unfair, but we asked half for their gut feeling *before* seeing the indicators from our index, and half for their views *after* seeing the index indicators, with very different results.
